

The seven corruption families, one series of monash_tourism_monthly. Grey = clean, red = corrupted, dashed = forecast origin.

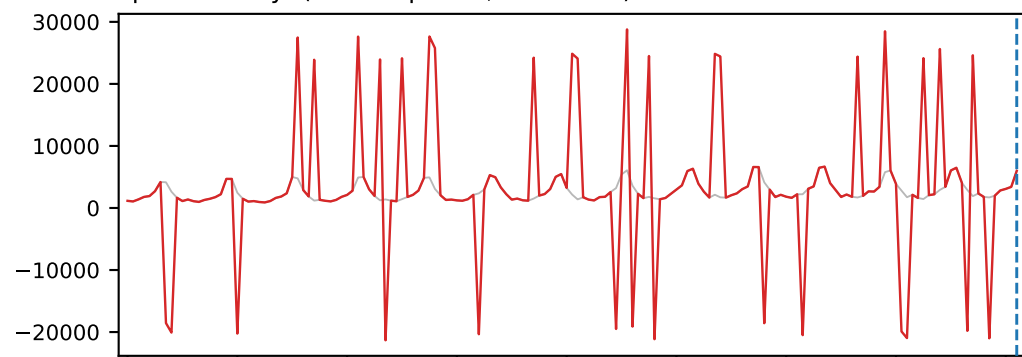

clean context

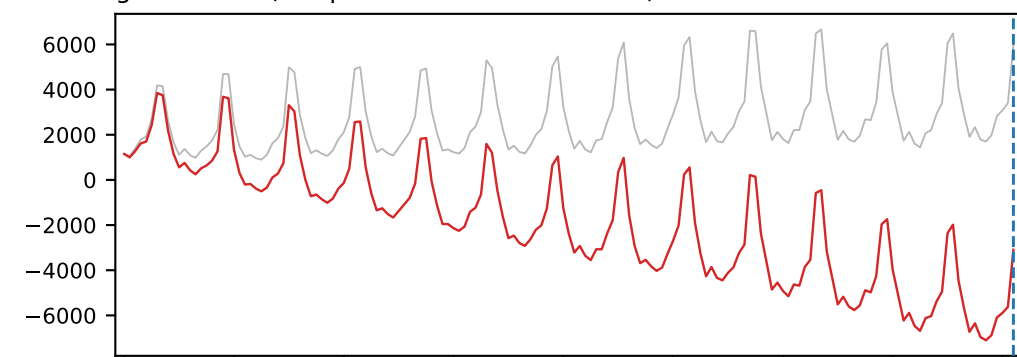

spike magnitude (12x scale, 5% of points)

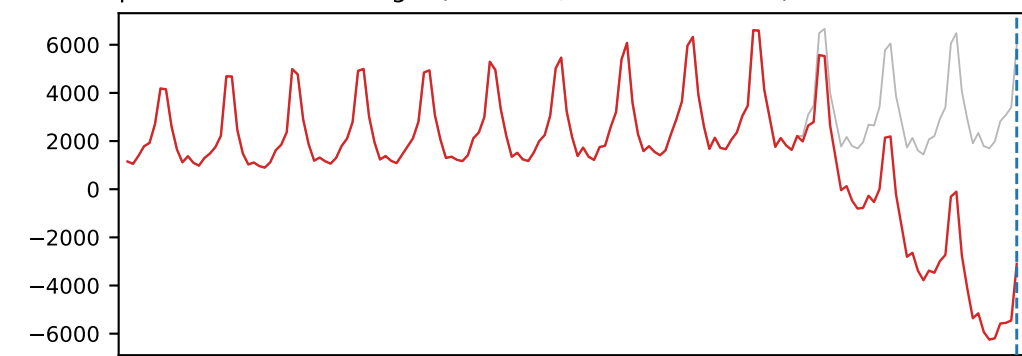

spike density (20% of points, 20x scale)

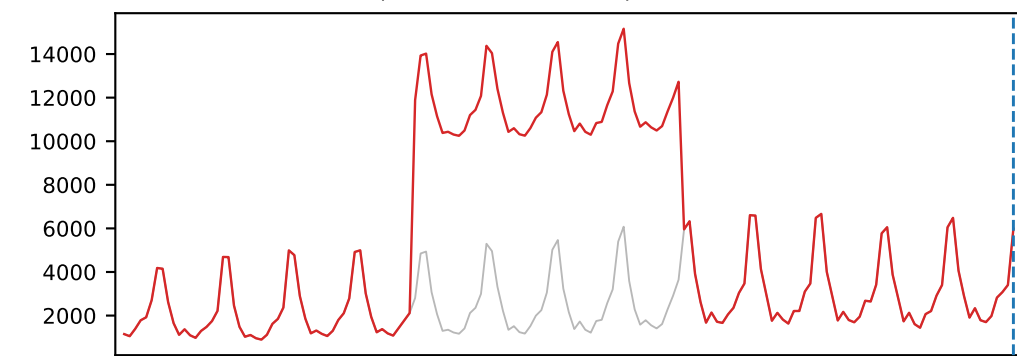

global drift (ramp over the whole context)

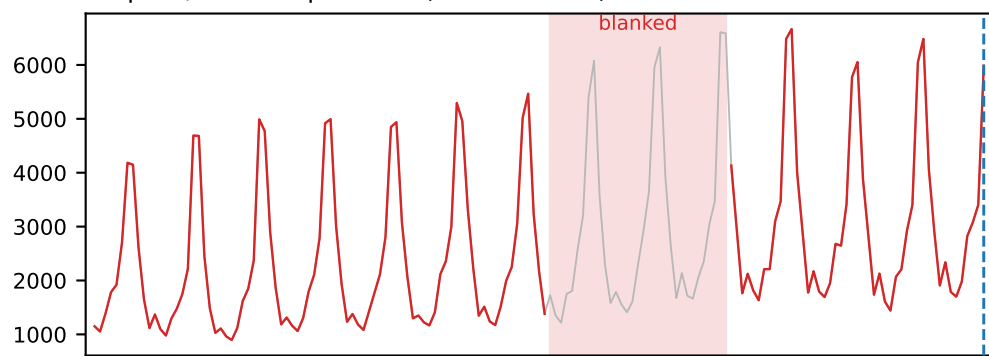

persistent trend change (last 25%, same end-offset)

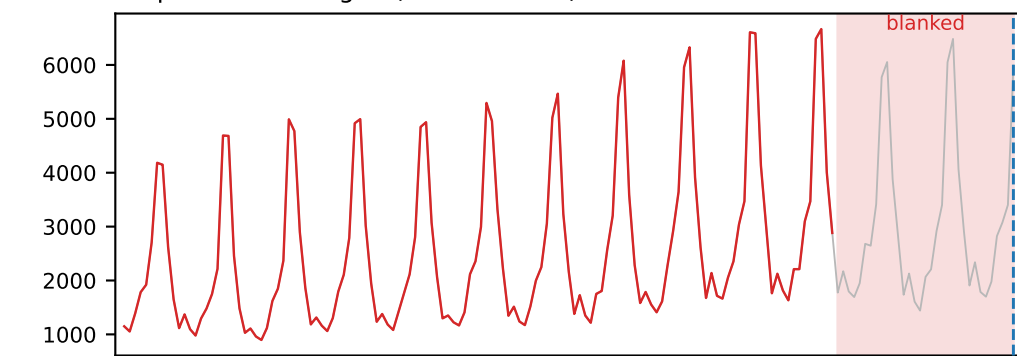

transient level shift (random 30% block)

dropout, random position (20% blanked)

dropout at the origin (20% blanked)

context step
